

Should you use JPA for your next project?

What kind of database do you use?							
NoSQL	Relational database						
No, JPA and Hibernate are not a good fit for NoSQL databases.	Do you use a static or dynamic/configurable domain model?						
	dynamic	static					
	No, the mapping definition is pretty static and can't be easily adapted at runtime.	What is the main focus of your use cases?					
		Complex reporting / data mining	A little bit of both		Standard CRUD		
		No, it's easier to implement the required complex queries with SQL.	How many highly complex queries, stored procedures, and custom database functions will you have?				
			A lot	A few		Not that many	
			No, JPA and Hibernate are not a good fit for this application.	Yes, JPA and Hibernate can be a good fit for this application.		Yes, this is a great application for JPA and Hibernate.
